Lightning Protection Systems (LPS) Inspection Checklist

(According to MS IEC 62305)

This checklist provides guidance for lightning protection systems inspection in compliance with IEC 62305, ensuring structures are properly protected against lightning strike.

Notes:

- 1. This checklist is intended to ensure that Lightning Protection Systems (LPS) are installed, operated, and maintained in accordance with the requirements outlined in MS IEC 62305.
- 2. The inspection and repairs should be conducted by an Electrical Contractor registered with Suruhanjaya Tenaga (ST).
- 3. Please refer Appendix for additional information.
- 4. Disclaimer: The completion of this checklist does not necessarily guarantee that the LPS is in full compliance.

LPS Configuration and Components

*Gambar hanyalah contoh

Air-termination systems can be composed of any combination of the following elements:

- a) rods (including free-standing masts);
- b) catenary wires;
- c) meshed conductors.

Lightning Protection System (LPS) Design based on Lightning Protection Level (LPL)

| Lightning Protection Level Table | | | | | |
|----------------------------------|----------|----------------|---------------------|----------------------------|--|
| LPL | Class Of | Protectio | Typical Distance, m | | |
| | LPS | Rolling Sphere | Mesh Size, m | (between down-conductors & | |
| | | Radius, m | | between ring conductors) | |
| I | I | 20 | 5 X 5 | 10 | |
| II | II | 30 | 10 X 10 | 10 | |
| | | 45 | 15 X 15 | 15 | |
| IV | IV | 60 | 20 X 20 | 20 | |

- 1) Lightning Protection Levels (LPL) are an important aspect of designing a Lightning Protection System (LPS). They define the required protection level based on the risk assessment of a structure and the potential consequences of a lightning strike.
- 2) The LPLs are categorized into four main levels: LPL I, II, III, and IV. These levels correspond to different levels of protection and are associated with different lightning parameters, such as peak current, charge, and specific energy. The higher the LPL (LPL I), the lower the allowed risk and the more stringent the requirements for the LPS.

LPS Inspection and Maintenance based on LPL

| Lightning Protection Level | Visual Inspection | Complete Inspection | * Critical Systems Complete Inspection |
|----------------------------|-------------------|---------------------|---|
| (EI E) | (Year) | (Year) | (Year) |
| I and II | 1 | 2 | 1 |
| III and IV | 2 | 4 | 1 |

* Critical Systems: e.g.: parts of the LPS exposed to severe mechanical stresses such as flexible bonding straps in high wind areas, SPDs on pipelines, outdoor bonding of cables etc.
